VerfiX

Swiss Trust Infrastructure

Verify Identity. Prevent Fraud. Automate Compliance. One Infrastructure Layer.

VerfiX unifies identity verification, fraud intelligence, AML compliance, and trust scoring into one platform for banks, fintechs, insurers, governments, and other regulated organizations.

STRATEGIC POSITIONING

What VerfiX Is

VerfiX IS	VerfiX is NOT
CHECK Swiss Trust Infrastructure for Regulated Industries	CROSS A traditional KYC point solution
CHECK Identity orchestration and compliance automation	CROSS A biometric vendor or AI startup
CHECK Multi-modal verification (document, face, voice)	CROSS A digital identity wallet or eID issuer
CHECK AML, KYB, and fraud intelligence platform	CROSS A research or academic project
CHECK Flexible deployment: SaaS to On-Premise	CROSS A single-feature compliance tool

Every signal. One decision.

Trust Engine(tm) combines identity, compliance, fraud, and risk signals into one explainable Approve / Review / Reject decision with full audit trail.

THE PROBLEM

One Platform Replaces Many

Most organizations run identity, compliance, and fraud on separate systems. Fragmented data, disconnected audit trails, compounding vendor risk.

Capability	Traditional Approach	VerfiX
Integration	Multiple APIs per vendor	One API for everything
Vendor lock-in	Locked into each vendor	Full provider flexibility
Decision	Manual review required	Automated by Trust Engine(tm)
Compliance	Separate compliance systems	Integrated workflows
Identity data	Fragmented across systems	Unified trust layer
Audit trail	Scattered, hard to reconstruct	Unified, exportable, audit-ready
Data residency	Depends on each vendor	Swiss residency option built in

PLATFORM

Four Pillars of Trust Infrastructure

Identity Verification Document, face, voice, and liveness. Multi-modal verification in one flow.	Fraud Intelligence Deepfake detection, synthetic identity, voice cloning, document forgery.
Compliance Automation AML, sanctions, PEP, KYB with UBO checks and exportable audit trail.	Trust Engine(tm) Every signal combined into one explainable Approve / Review / Reject decision.

TRUST ENGINE (tm)

The Decision Layer Behind Trusted Digital Onboarding

Trust Engine(tm) combines identity, compliance, fraud, and risk signals into a single, explainable decision with configurable rules, full audit trail, and real-time output.

Document Verification	--> OCR Fraud Detection
Face Verification	--> Match Liveness Deepfake
Voice Verification	--> Biometrics Anti-Spoofing
AML / Sanctions Screening	--> PEP Sanctions Watchlists
KYB Verification	--> Directors UBO Registry
Fraud Intelligence	--> Synthetic ID Device Behavior
Trust Engine(tm)	Score Rules Decision
APPROVED	REVIEW / REJECTED

SOLUTIONS

Customer Onboarding Document Verification Face Match AML Screening Age Verification	Business Verification KYB UBO Identification Director Checks Registry Verification
Telephone Banking Voice Biometrics Voice Anti-Spoofing Call Centre Authentication	Fraud Intelligence Suite Deepfake Synthetic Identity Document Fraud Voice Cloning

Compliance Automation

On-Premise

INDUSTRIES

Built for Regulated Sectors

Industry	Key Use Cases	Recommended Stack	Deployment
Banking & Wealth	KYC onboarding Telephone auth Fraud prevention	Doc + Face + Voice + AML + Trust Engine(tm)	Private Cloud / On-Premise
Fintech	Digital onboarding AML automation Trust scoring	Doc + Face + AML + Trust Engine(tm)	SaaS / Swiss Dedicated
Crypto & Digital Assets	Exchange onboarding Wallet KYC VASP compliance	Doc + KYB + Sanctions + Trust Engine(tm)	SaaS / Swiss Dedicated
Insurance	Claims verification Voice authentication Onboarding	Doc + Face + Voice + AML	Private Cloud / On-Premise
Government	Citizen verification Digital services Audit workflows	Doc + Face + Trust Engine(tm) + Audit Logs	On-Premise
Healthcare	Patient verification Secure access Compliance	Doc + Face + Trust Engine(tm)	Private Cloud / On-Premise
Telecom	SIM registration Remote onboarding SIM-swap prevention	Doc + Face + Voice	SaaS / Swiss Dedicated
Marketplaces	Seller onboarding Merchant verification Trust & safety	Doc + KYB + AML + Trust Engine(tm)	SaaS
Mobility	Driver verification Fleet onboarding Access control	Doc + Face + Trust Engine(tm)	SaaS
Real Estate	Tenant verification Permit checks Business verification	Doc + Face + KYB	SaaS / Swiss Dedicated

DEPLOYMENT

Deploy on Your Terms

Model	Data Residency	Security Level	Typical Customer
SaaS	Managed cloud	Standard	Fintechs, scale-ups, growing businesses
Swiss Dedicated	Switzerland only	Swiss Residency	Swiss banks, cantonal banks, PostFinance, insurers requiring Swiss residency
Private Cloud	Customer-controlled	Enhanced	Large enterprises, multinational insurers, financial groups
On-Premise	Customer datacenter	Maximum sovereignty	Governments, central banks, critical infrastructure operators

NEW PRODUCT

VerfiX Gateway

The Trust Layer Between Digital Identity Ecosystems and Regulated Organizations.

As digital identity ecosystems emerge across Europe, regulated organizations face growing complexity: different countries, issuers, credential formats, and trust registries. VerfiX Gateway abstracts this complexity. Connect once, verify everywhere.

WITHOUT VerfiX Gateway

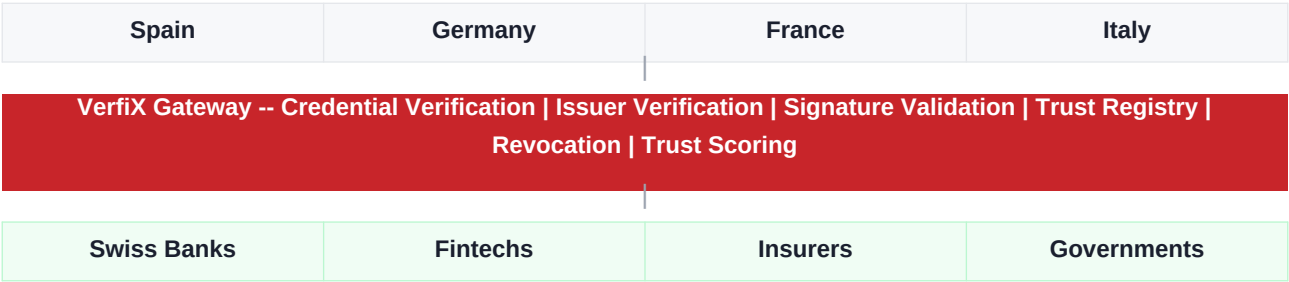

- Different ecosystem per country
- Different trust registries per issuer
- Different credential formats
- Bespoke integration per ecosystem

WITH VerfiX Gateway

- Connect once to VerfiX Gateway
- Verify credentials from any ecosystem
- One API -- all jurisdictions
- Future-proof as ecosystems evolve

ARCHITECTURE

One Gateway. Every Ecosystem.

KEY CAPABILITIES

Wallet Verification Verify authenticity of digital identity wallets before accepting credentials.	Credential Verification Validate credentials against trusted issuer registries and schema standards.	Issuer Verification Confirm issuers are recognized within the relevant national ecosystem.
Digital Signature Validation Verify cryptographic signatures to confirm credential integrity.	Trust Registry Verification Cross-reference credentials against national and European trust registries.	Revocation Status Checks Confirm credentials have not been revoked, suspended, or invalidated.
Cross-Border Identity Verify identities issued in one jurisdiction when presented in another.	Identity Interoperability Normalize identity data from any ecosystem into one consistent output format.	Trust Scoring Every credential verification produces a trust score via Trust Engine(tm).

SECURITY & COMPLIANCE

Enterprise Security at Every Layer

Swiss Data Residency Storage and processing within Swiss infrastructure on dedicated/on-premise deployments.	Encryption TLS for data in transit. AES-256 for data at rest. Key management per deployment.
Audit Logs Immutable timestamped records of every verification event -- exportable for regulators.	Access Control Role-based permissions, SSO, and MFA for compliance team management.
Private Cloud Isolated environments for institutions requiring infrastructure separation.	On-Premise Full on-premise deployment. No outbound network calls. Maximum data sovereignty.

API PLATFORM

API-First. Built for Scale.

One integration connects all identity, compliance, and fraud modules. Full documentation, sandbox, and SDKs.

REST APIs OpenAPI specification, versioned endpoints, OAuth 2.0, rate limiting.	SDKs Node.js, Python, PHP, Java -- production-ready, fully documented.
Webhooks Real-time event delivery for verification status, decisions, and alerts.	Sandbox Full test environment with simulated identity and compliance scenarios.
Documentation Developer-first docs, integration guides, and code examples.	Multi-Provider Routing Route checks across providers via single API -- zero rebuild required.

ABOUT VERFIX

Built in Switzerland for Regulated Identity Infrastructure

VerfiX is a Swiss trust infrastructure platform serving banks, fintechs, insurers, crypto companies, healthcare providers, and governments across Switzerland and Europe.

Swiss-incorporated

Swiss regulatory requirements built in from day one

Optional Swiss data residency

nFADP and GDPR compliant architecture

API-first engineering

Leadership

Ahmed

Founder & CEO | Strategy & Product

Building VerfiX as Swiss trust infrastructure -- unifying identity verification, compliance automation, and fraud intelligence for regulated industries across Europe.
